LAN-IQ SDR (Stand-alone SDR)

The LAN-IQ SDR is a cool stand alone software defined radio with a 30 kHz to 1700.00 MHz continuous frequency range.

One of the videos shows reception of the Es'hail 2 satellite in the 10 GHz band, but after emailing Alex, he explained that for Es'Hail reception, he used a modified LNB for Satellite TV that down-converts from 10 GHz to 349.5 Mhz and the LAN-IQ SDR allows to take in account external converter IF to indicate correct RX frequency on it's display.
