Pebble HF

Just when I thought I had enough distractions I ran across this, a very inexpensive and easy to assemble QRP kit that can output up to 5 watts on 20 M (apparently a 40M one is in the works too), does phone, CW and digital modes.

CRKITS is distributing to all non-US countries (I e-mailed Adam Rong the owner of CRKITS to see if he ships to Canada, he has verified this now). Adam is a likeable and interesting fellow, you can also check out some of the stuff he has on his site: https://crkits.com/

"My kits will be slightly different. You need to print your own case with the files from Print Your Own Pebble HF Case - Ham Radio Duo. I will offer the rest, including the PCBA from the same factory and all the through hole parts. The unit price is 50 USD including shipping. Please PayPal directly to rongxh@gmail.com and leave your ship to address (non US address only). I will place order once I have at least 10 kits order on hand. After order placed to the factory, it will take about 10 days to ship. I will keep you guys informed in this group."

I couldn't resist so ordered one already, so hopefully getting it soon. VA7ILO
