Winlink P2P

I've finally managed to send P2P messages back and forth between my station,VE7HZF-10, and the SCRD EOC station VE7SCE using Winlink Express. If others want to experiment with this, I'll leave my station on and tuned to **145.030 MHz**. If enough people are interested, I'll acknowledge receipt of the messages on the Tuesday evening net.

I've written a little HowTo here to get started.
