

RC Fire Hall

Today, VE7XNC and VE7HZF relocated the club's antenna from the North East corner of the fire hall to the South East corner. With Chief Pat's permission, we ran the coax just above the fire station's communication closet, where the repeater will be installed. The next phase will be to run power from the comm's closet out to the top, install a grounded bus bar with coax lightening protectors, and move the repeater.
