

JS8Call Now Faster

Last week, [JS8Call](#) released their version 2.0. The big improvement is that there are now three transmission speeds:

Mode	Bandwidth	Speed	frame length	Mininum SNR
Normal	50 Hz	16 WPM	15 seconds	-24 dB
Fast	80 Hz	24 WPM	10 seconds	-20 dB
Turbo	160 Hz	40 WPM	6 seconds	-18 dB

The new MULTI decoder can decode all three speeds at once.

Tonight, I gave it a quick spin and got copied on “Turbo” by a station near Boston at -13 dB on 80 m (at 22:30).
