Radio Programming

Today in the meeting, we discussed how the VE7RNA outage on Vancouver Island affected many people who could use an alternate repeater (like VE7DJA) but didn't know how to input the proper offset and tone in their pre-programmed radio. To be fair, different radios can be very different to program, and it's easy to forget how to do it (again) once it's done...

So in the spirit of emergency preparedness, I started a how-to page to collect Quick Programming instructions for different radios. Here's an example that I made for the Icom IC-207H:
