ReactOS Attempt

I recently just learned of ReactOS, a Free and Open Source Operating System that has been in the works for over 20 years and aims to be able to natively run Windows programs and drivers. It's still feature-incomplete alpha software, but I thought it could be a good way of running ham radio programs made for Windows so I gave it a try in Virtualbox and tried to install Winlink.

TLDR:

Winlink loads but I can't seem to be able to configure it. Here's what I've done so far and where it fails. If anyone else is interested in tinkering with this, let me know if you manage to get passed any of these issues...

Download ReactOS

• First step: Downloaded the BootCD (not LiveCD) of ReactOS 0.4.13 and save it.

Virtualbox

I used Virtualbox 6.1 under LinuxMint 20 XFCE.

• Create a new machine.

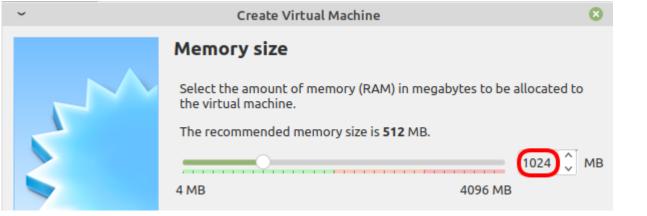

• Name it "ReactOS" and the version will pre-populate to "Windows 2003 (32-bit)" on its own.

• I doubled the RAM to 1024MB

8

• To load the "install CD", click on the word "Storage":

Storage	
Controller: IDE IDE Primary Master: IDE Secondary Master:	ReactOS.vdi (Normal, 20.00 GB) [Optical Drive] Empty
 alaat ((Euseby)) avad alialy	an tha CD isan

Select "Empty" and click on the CD icon.
 ReactOS - Settings

🧾 General	Storage				
System	tem <u>S</u> torage Devices		Attributes		
Display	🔶 Controller: IDE	Optical <u>D</u> rive:	IDE Secondary Master	~ •	
Storage	ReactOS.vdi		Live CD/DVD		
	CO Empty	Information	-		
🗘 Audio		TUDO			
Navigate to the file ReactOS-0.4.13.iso and you should see:					
~	ReactOS - Settings		8		
🧾 General	Storage				
System	system Storage Devices				
Display	🔶 Controller: IDE	Optical <u>D</u> rive:	IDE Secondary Master	× •	
Storage	ReactOS.vdi		Live CD/DVD		
Storage	ReactOS-0.4.13.iso	Information			
Back to the first screen, you can now start the machine.					
٢					
New Settings Discard Start					

Install ReactOS

• The install screen will start and you simply press ENTER.

ReactOS 0.4.13 Setup
Language Selection
 Please choose the language used for the installation process.
 Then press ENTER.
 This Language will be the default language for the final system.

 Albanian
 Arabic an
 Arabic

• In fact, you'll have to press ENTER a few times until this next screen, where you need to press P first, and then ENTER:

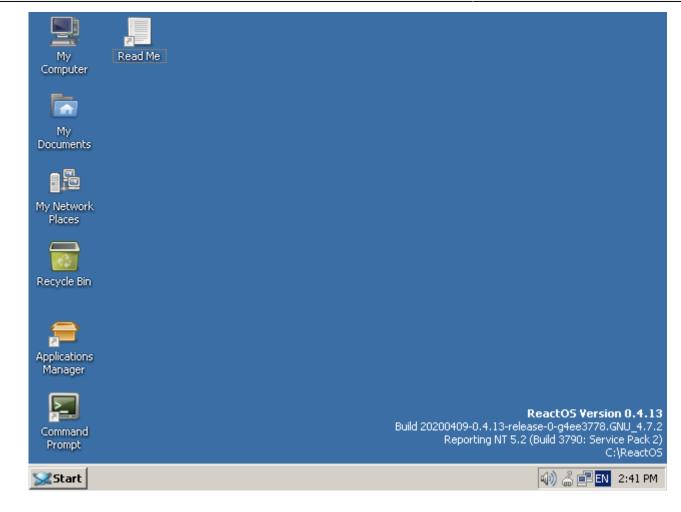

The spac	list below shows existing partitions and unused disk e for new partitions.
•	Press UP or DOWN to select a list entry.
•	Press ENTER to install ReactOS onto the selected partition.
•	Press P to create a primary partition.
•	Press E to create an extended partition.
•	Press L to create a logical partition.
•	Press D to delete an existing partition.
20) GB Harddisk Ø (Port=Ø, Bus=Ø, Id=Ø) on uniata [RAW]
	Unpartitioned space 20479 MB

• ReactOS will show a bunch more screens, simply follow the prompts. It'll reboot and install more things. Then at some point, it'll ask to remove the CD. This is done using the CD icon at the bottom of the Virtualbox screen:

ENTER = Continue F3 = Quit

• That looks promising! ReactOS has a Windows 2000 look, which I personally prefer to all the other versions of Windows.

Install Firefox

Now that ReactOS is installed, we're ready to install some programs.

• Click on the Applications Manager:

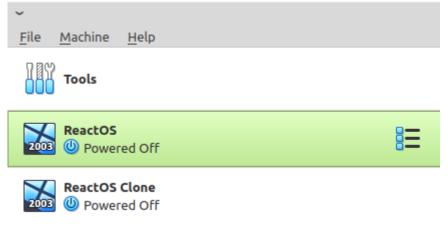

• Search for Firefox and install version 48.

🖴 ReactOS Applications Manager			
Eile Programs Help			
2 2 3 2 9	× 📲	firefox	
I Available for installation	Name	Version	Description
	Adobe Flash Player 29 NPAPI Plugin	29.0.0.171	Flash Player plugin for
Video	Mozilla Firefox 28	28.0	A popular Web browse
Graphics	Mozilla Firefox 3.6	3.6.28	A popular Web browse
Games & Fun	Mozilla Firefox 48	48.0.2	A popular Web browse

• Once Firefox is installed, do **not** let it update; that broke it for me.

• Up to this point, everything works fine, but we're about to break things so before we continue, let's create a clone of the Virtualbox install...

Attempt #1

- The first thing I tried was to install Winlink Express.
- It installed but wouldn't load at all.

Attempt #2

This Winlink with Wine page says to install these in the following sequence:

- 1. .NET 3.5 sp1
- 2. "Microsoft Visual Basic 6 Runtime Service Pack 6"
- 3. "Microsoft HTML Rendering Engine 8"
- 4. "Visual C++ 14.0"

I got stock at step 1...

• At first, it looked like it was gonna work:

👼 Microsoft .NET Framework 3	.5 SP1 Setup

Microsoft .NET Framework 3	.5 SP1 Setup	<u> </u>		

Attempt #3

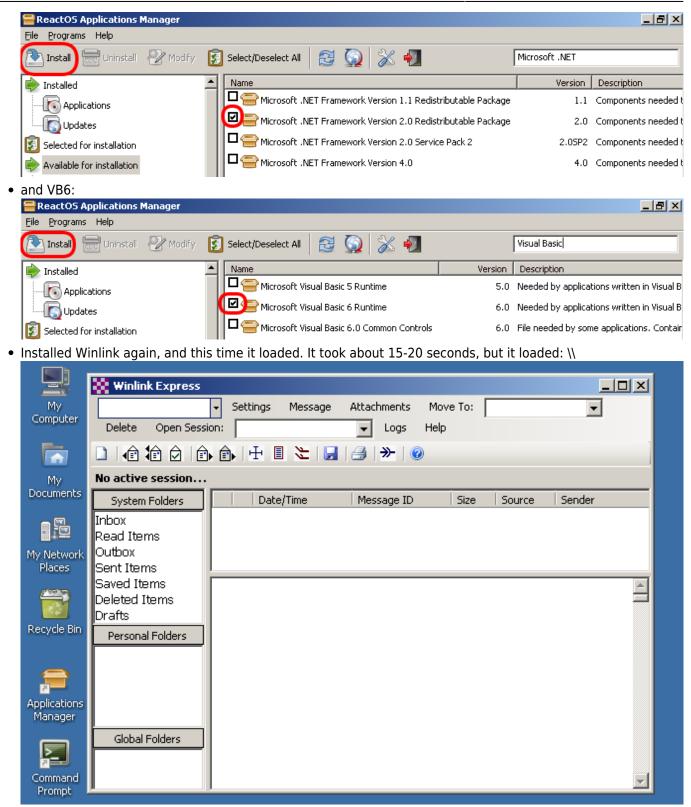

I deleted the machine and re-cloned the clone I made earlier.

Total Download Progress:

• From the Applications Manager, I installed .NET version 2: $\$

Status: Re-establishing connection with the server (attempt 5 of 5).

170 MB / 268 MB

• But unfortunately, when I go to Settings → Winlink Express Setup... and fill out the information, it doesn't "Update".

Attempt #4

I tried the same thing as the previous attempt but with .NET version 4 and Winlink wouldn't even load.

To Be Continued...

... maybe. I don't really know what else to try so I'll leave this aside until I think of something else to try. If you have ideas, please let me know! - *Patrick, VA7FI 2020/09/28 10:15*
