## **Hidden Baofeng Settings**

I stumbled on these two "hidden" settings on my Baofeng radio yesterday which I added to the Short Guide:

Last update: 2021/07/10 08:04

- Short press to reverse repeater output and input
- Long press to scan channels or frequencies

- Short press to toggle between H/L power
- Long press to lock the controls

## **Other Tips and Settings**

From the MENU settings:

- 7. TDR ON allows the radio to quickly scan between the A/B channels or frequencies.
- 8. BEEP OFF turns of the beep when pressing buttons.
- 14. VOICE OFF turns off the voice when pressing buttons.
- 21/22. MDF-A/B sets how the channels / frequencies are displayed. I have one set to NAME and the other to FREQ.
- 39. ROGER OFF turns off the roger beep. Please turn this off!

The other setting I recommend changing is the squelch levels using CHIRP. More info on how to do that on the Chirp How-to page.
