

# VE7RXZ Issue [RESOLVED]

October 26 update:

The repeater is back online. It seems that a simple reboot solved the issue. I restarted Echolink and the crossband link to VE7SCK. - [Patrick, VA7FI](#) 2021/10/26 15:49

Original Post:

VE7RXZ is experiencing an issue where it is transmitting a constant tone. The tone is being transmitted without the usual 100.0Hz tone that the repeater usually transmits with. If you have CTCSS enabled on your radio, you would need to turn this off to hear the tone.

We are in communications with Island Communications who host the repeater to try to resolve this issue.
