APRS

Pinpoint is a Windows program for APRS.

Configuration

To use with Signalink, see the Packet How-to.

Once the radio, the Signalink, and the Soundmodem are configured, start PinPoint and change these settings:

Note:

- Network Kiss Port (8100) in the PinPoint settings needed to be changed to match the SoundModem settings.
- Also, the Serial TNC Settings don't matter since they are not being used by Network Kiss.
- See APRS SSID Recommendations to setup your callsing properly.
