

Tunnelling

In order to setup a tunnel connection between two AREDN nodes, one needs to act as the server, and the other as the client. In this example, VA7FI-HAP-1 is the server and VE7RBE-HAP-1 is the client (and the details are made up):

Server Side

On [VA7FI-HAP-1's Tunnel Server](#) page:

From left to right:

- Client: VE7RBE-HAP-1 is Robert's node name.
- A unique password is created
- Net: 172.31.39.164 is automatically assigned.
- Some optional Contact Info can be added.

VA7FI's public IP address will also need to be communicated to VE7RBE. You can quickly find it by searching for "what's my ip" in

Client Side

On [VE7RBE-HAP-1's Tunnel Client](#) page:
