

# Git

## Test Scenario

- Create two files in a remote folder to simulate the wiki install on the server.
- Change their permissions and ownership to match what's on the server:

```
ptruchon@ThinkPad-T440:~/gittest/remotes$ ls -l
total 24
-rwxrwx--- 1 ptruchon www-data 26 Dec 26 10:20 file1.txt
-rwxrwx--- 1 ptruchon www-data 26 Dec 26 10:20 file2.txt
```

- Initialize git:<code bash>

```
git init git add . git commit -m 'initial commit on remote' git log commit
0e5ccdedd1c9188996aadad3a8e2be5a319ab789 (HEAD → master) Author: Patrick Truchon patoo@rbox.me Date:
Sun Dec 26 10:21:24 2021 -0800
```

```
initial commit on remote
```
