# **Using Jitsi**

We've been testing Jitsi for video chat because of the unlimited time that it offers compared to Zoom. Here are a few tricks we've learned so far:

## On a computer:

- You don't need to download anything since Jitsi runs straight from the browser.
- Jitsi seems a bit CPU-hungry so you should close all other programs during the meeting.
- Use headphones instead of the laptop's speaker to helps reduce feedback for others.

## **Getting Started**

- In your browser, type the URL we emailed you and enter the password when prompted, then confirm which camera and microphone you want to use.
- Before joining the meeting:, enter your name and callsign, and put yourself on mute.

## ×

## **During The Meeting**

- Stay muted unless you're the one talking to reduce the amount of background noise / feedback.
- We'll also be using the "raise hand" function if we need to vote on anything.
- To see the control buttons, move your mouse and they'll appear at the bottom of the screen.

#### ×

# On a mobile device

- Download the Jitsi app instead of using the browser.
- We've notice some devices create a lot of feedback when using the device's speakers so headphones are a must.

## **Getting Started**

- Open the app, and click on the three horizontal lines in the top left corner.
- Add your name and callsign and Start with audio muted.
- Back at the previous screen, enter the name of the room.

#### ×

• type the URL we emailed you and enter the password when prompted, then confirm which camera and

microphone you want to use.

• Before joining the meeting:, enter your name and callsign, and put yourself on mute.
