## **Linking and Viewing PDFs**

There are many ways to link, view, or create PDF in Dokuwiki.

## **External Links**

The first way to link to an external pdf is to use [[ ]] brackets as one would for links:

Code	Result
[[https://bcarcc.org/twometre.pdf]]	https://bcarcc.org/twometre.pdf
[[https://bcarcc.org/twometre.pdf Two Metre Repeaters]]	Two Metre Repeaters

This works, but notice the "Earth" icon on the left of the link, identifying that it's a link to an external webpage. We can change this identifying icon to a PDF by using the {{ }} brackets instead, which are also used for images:

Last update: 2019/08/11 15:28

Code	Result
{{https://bcarcc.org/twometre.pdf}}	twometre.pdf
{{https://bcarcc.org/twometre.pdf Two Metre Repeaters}}	Two Metre Repeaters

## **Internal Links**

These brackets also work for internal files that are stored on our server (like images):

Code	Result
{{:blog:2019-08-11:twometre.pdf  }}	twometre.pdf
{{:blog:2019-08-11:twometre.pdf   Two Metre Repeaters}}	Two Meter Repeaters
