Linking and Viewing PDFs

There are many ways to link, view, or create PDF in Dokuwiki.

External Links

The first way to link to an external pdf is to use `[[  ]]` brackets as one would for links:

Code	Result
`[[https://bcarcc.org/twometre.pdf]]`	https://bcarcc.org/twometre.pdf
`[[https://bcarcc.org/twometre.pdf|Two Metre Repeaters]]`	Two Metre Repeaters

This works, but notice the "Earth" icon on the left of the link, identifying that it's a link to an external webpage. We can change this identifying icon to a PDF by using the `{{  }}` brackets instead, which are also used for images:

Code	Result
`{{https://bcarcc.org/twometre.pdf}}`	twometre.pdf
`{{https://bcarcc.org/twometre.pdf|Two Metre Repeaters}}`	Two Metre Repeaters

Internal Links

These brackets also work for internal files that are stored on our server (like images):

Code	Result
`{{:blog:2019-08-11:twometre.pdf |}}`	twometre.pdf
`{{:blog:2019-08-11:twometre.pdf |Two Metre Repeaters}}`	Two Meter Repeaters

Using the PDF.js Plugin, it's also possible to display a local pdf in a window. For example,

```
{{pdfjs 600px,300px>:blog:2019-08-11:twometre.pdf}}
```

gives:

Note, that the width (`600px`) and length (`300px`) parameters are optional. Also, this doesn't work with external links.
