

# Net Roll Call Spreadsheet

## How to Setup

Here's an overview of how to download and setup your local copy the first time:

1. Download the Google Sheet as OpenDocument ( .ods ). It might take 30-45 seconds to prepare the download; this is normal. Note that the file is not public, contact [Patrick, VA7FI](#) if you'd like access.
2. Make sure you have [LibreOffice](#) installed on your computer.
3. Open the downloaded file, freeze the headers, and save the file.

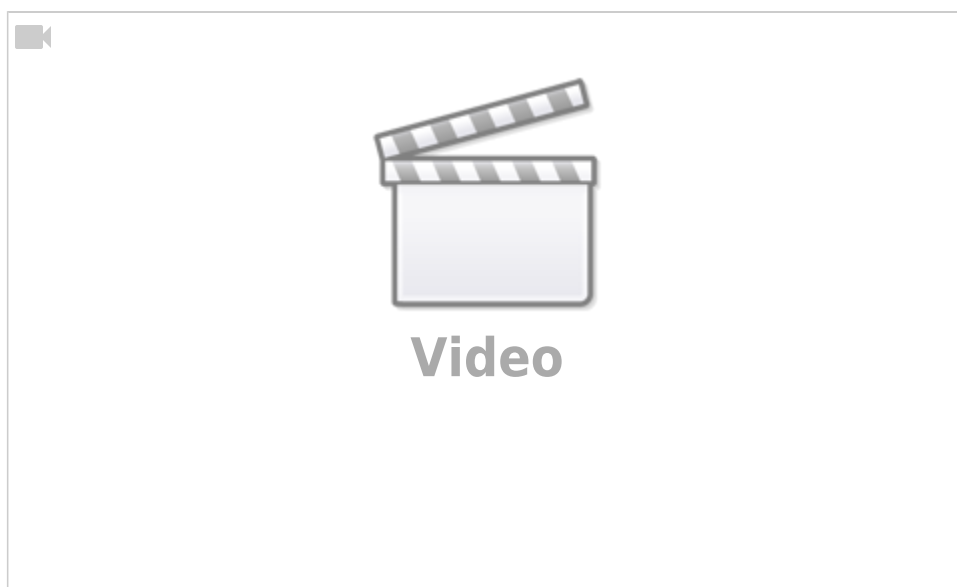

## How to Use

Here's an overview of how to use the sheet for a net:

1. Open the file you saved.
2. Type the suffix in column A, and the prefix in column B if needed.
3. **Don't type or delete anything in the orange cells as they contain formulas.**
4. When you're done, close the file but do **not** save it. That way all the callsigns you typed won't be there next time you use it.
5. Again, **Don't type or delete anything in the orange cells.**
6. If you break the sheet by deleting formulas, you can simply download a fresh copy and start from scratch.

The date in the title of the file represents the last time the spreadsheet was updated. You'll want to download a fresh copy from time to time to take advantage of new entries that are added periodically.

## Demo

# Optional Information:

## Android Tablets/Phones

The spreadsheet was made to be used offline on computers, but some people might still want to use it on their tablets. Here are some instructions on how to do that for Android devices.

The first steps are to open the spreadsheet and make a copy of it to your "Sheets" app. You will need a Google Account to do this:

- Open the link in the mobile browser.
- Click on USE THE APP (you need "Sheets" installed).
- Click on the three dots on the top right corner.

docs.google.com/spreadsheets/d/1frF...

**Net Roll Call**

Data LiveLogSheet LiveLogSheet (lite) Instructions

	B	C	D	E	F
1	Suffi	Pref	Name	BDay	Spouse
2	AA	VA7	Richard

31	ASI	VA7	Andrew		
32	ASO	VE7	Steve (SK)		

**Edit with the Sheets app**  
Make tweaks and share with others to edit at the same time.

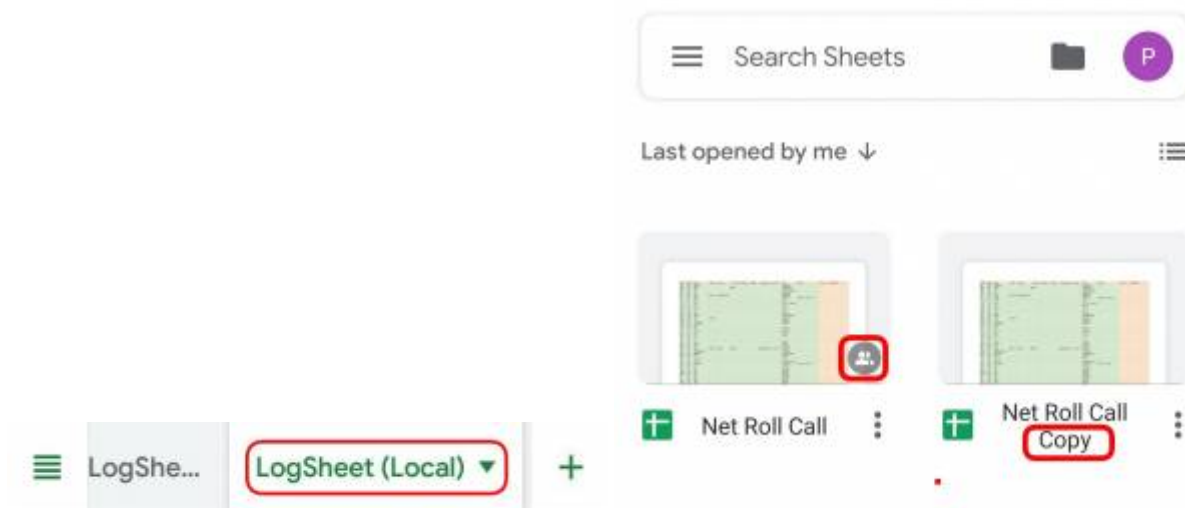

NO, THANKS USE THE APP

- Click on Make a copy.

- Add the word “Copy” to the end of the name to distinguish it from the original.

- You are now using your copy, which you can edit.
- At the bottom, select LogSheet (Local), which doesn't query the ISED tab and is quicker for mobile devices.
- In your Sheets app, you should now see two versions:
  - The one on the left with the little shared symbol is the original which you can't edit.
  - The one on the right is your own personal copy.

- Every so often, you should delete your personal copy (or make a backup) and download a fresh copy so that you can have the latest database.
- Please do NOT edit the database in your personal copy since no-one else will benefit from your edits. Instead,

email [Patrick, VA7FI](#) the information that needs to be added / edited in the online version.

# Notes for Admins

## Adding Names

To add a new name to the Local Data sheet:

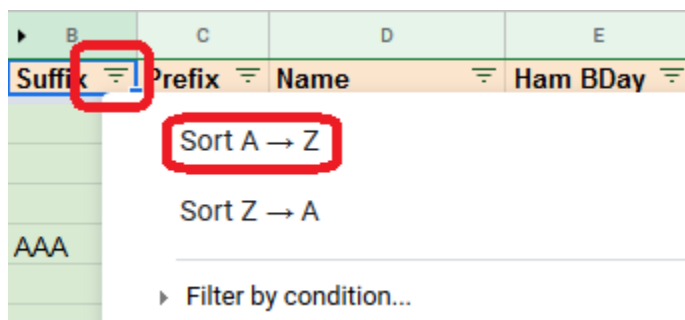

1. Edit the Google spreadsheet directly in the browser (**not your downloaded copy**). That way everyone will benefit from your updates next time they download a fresh copy.
2. Scroll down and use one of the empty lines below the current list. It doesn't have to be the very next line. For example, as of this writing, the last entry is in line 462, but you could use line 479. It really doesn't matter. All these empty lines at the bottom of the list have the formulas in Column A and N already pre-filled.

Do not Insert a line somewhere in the middle of the sheet to keep names sorted by callsigns. The problem with doing this is that Column A (which is hidden) and Column N contain important formulas and inserting a line leaves those cells blank for the new line.

	B	C	D	E	F	G	H	I	
1	Suffix	Prefix	Name	Ham BDay	Spouse	Spouse BDay	Children	Children Bday	Anniv
476									
477									
478									
479	AAA	VE7	test						
480									
481									

Now to sort, click on the upside-down triangle sign on the right of Suffix to see the filter menu for that column, and select Sort A → Z:

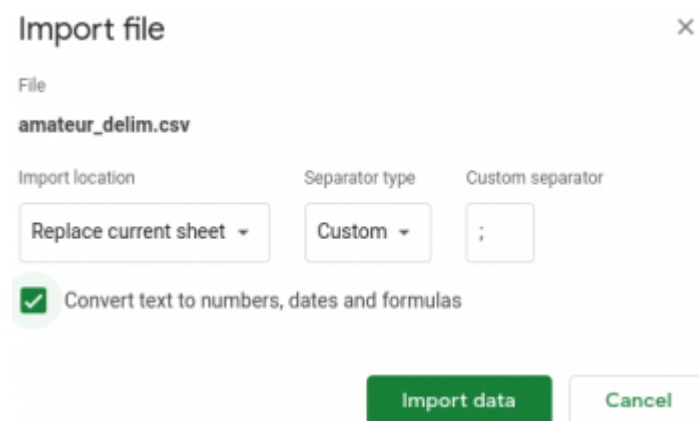

All the entries are now sorted by callsign suffix:

1	Suffix	Prefix	Name	Ham BDay	Spouse	Spouse BDay	Children	Children Bday	Anniv
2	AAA	VE7	test						
3	AAK	VE7	Windy						
4	AGG	VA7	Alan						
5	ACN	VA7	Robert						

## Deleting Names

To delete a name, do **not Delete Row**. Instead delete the green cells containing the information. Careful not to delete anything in the red cells in columns A and N which contain the formulas. Then resort the list to send the empty line back to the bottom.

## Updating the "ISED Data" Tab

Import file

File  
**amateur\_delim.csv**

Import location: Replace current sheet ▾

Separator type: Custom ▾

Custom separator: ;

☒ Convert text to numbers, dates and formulas

Import data Cancel

- Download [Amateur call sign list \(delimited TXT format\)](#).<sup>1)</sup>
- Extract amateur\_delim.txt
- In Google Sheets, unhide and select the ISED Data tab.
- Go to File > Import > Upload:
  - Replace Current Sheet
  - Custom
  - ;

<sup>1)</sup>

Instead of manually downloading the file from the ISED website, and unzipping it, I use this short BASH script:

```
#!/bin/bash

DIR="/home/ptruchon/Desktop"
wget --report-speed=bits http://apc-cap.ic.gc.ca/datafiles/amateur_delim.zip -P $DIR
cd $DIR
unzip amateur_delim.zip
mv amateur_delim.txt amateur_delim.csv
chmod 644 amateur_delim.csv
rm amateur_delim.zip lisezmoi_amat_delim.txt readme_amat_delim.txt
```
