

The BC Forest Service Radio Communication Network

The radioreference.com site lists the BC Forest Fire Frequencies with very little explanation.

Fortunately, the [BC Provincial Natural Resource page](#) links to the [Radio Communication Field Handbook](#): a 56-page pdf that includes pretty much everything about the system.

The Network comprises of:

- 331 mountain top repeater sites arranged into district systems
- 100 base stations
- 6 regional fire centres (each with multiple dispatch stations)

The information on pages 40-41, and 45 is summarized here:

Resource Road and Highway Channels

It's also probably worth mentioning that the [Resource Road and Highway Channels](#) are explained on pp. 18–21 of the Handbook but the frequencies are not listed there. BC Resource Road Radio Channel Maps can also be found on the [government website](#).
